**Subject:** RE: TCE in tucson - errata

I am planning on submitting this to EHP, but would request guidance to assure this addresses all concerns. Please let me know if you have comments/recommendations. Thank you.

In "Errata", Environ Health Perspect 113:A-18 (2003), the dates in Table 1 are in error regarding the 2.5ppb and 250ppb TCE exposure dates. While the actual dates are no longer available, all TCE drinking water exposures were the length of gestation and all of the animal exposure studies were run with concurrent controls. The end dates for the two groups are correct, but the groups would have been exposed to the respective TCE in drinking water between 1994 and 1995, along with the concurrent controls. As points of clarification, animals were ordered based upon a 40 animal maximum capacity, and all groups studied, both exposure and concurrent control, were randomly assigned.
